is characterised by the overexpression of an epidermal growth factor receptor (BrbB) and does not respond or responds poorly, to treatment with an anti-ErbB antibody, comprising administering to the mammal an anti-ErbB antibody-maytansinoid conjugate. The method is useful for treating cancer or tumours of the breast, ovary, stomach, endometrium, salivary gland, lung, kidney, colon, colorectum, thyroid, pancreas, prostate and bladder, preferably breast cancer. The breast cancer is a metastatic breast cancer or an aggressive form of metastatic breast cancer which overexpresses ErbB. The method is also useful for treating neuronal, glial, sstrocytal, hypothalamic, glandular, macrophagal, epithelial, stromal, blastocoelic, inflammatory, angiogenic and immunological disorders. This sequence represents the human HER2 (ErbB2)

           Human HER-2/neu protein (AAW01111), also called p185 or c-erbB2, is the product of the HER-2/neo oncogene (see also AAT40739). The protein is over-expressed in various cancers, including breast, ovarian, colon, lung and prostate. The intracellular domain of the protein can be used to immunise an animal against a malignancy with which the oncogene is associated. The polypeptide can be produced in transformed host cells for use in immunisation. Alternatively, animal cells are transfected in vivo or ex vivo with a viral vector that directs expression of the polypeptide.

                                                                                                                          1200
                                                                                                                                                  The invention provides an isolated antigen-presenting cell, which expresses at least an immunogenic portion of a polypeptide that produces an immune response to HER-2/neu protein. The antigen-presenting cells are useful as vaccines for eliciting or enhancing an immune response to HER-2/neu protein, particularly in treating or preventing malignancies in which the HER-2/neu oncogene is associated Specifically, these are useful for treating or preventing cancer, e.g. breast cancer, ovarian, colon, lung or prostate cancers. The present sequence represents the human HER-2/neu protein (also known as pl85 or c-erbB2).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              09
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New antigen-presenting cells, useful as vaccines for eliciting or enhancing an immune response to HER-2/neu protein, particularly useful for treating or preventing cancer, e.g. breast cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1081 AGSDVFDGDLGMGAAKGLQSLPTHDPSPLQRYSBDPTVPLPSETDGYVAPLTCSPQPEYV

The protein has an in-frame deletion of 16 amino acids, 2 of which are conserved cysteine residues, compared to the unspliced protein. The erbB-2 polynucleotide is used to construct probes for detecting disorders of cell transformation such as cancer. Antibodies to the protein may be used to detect SPLICE erbB-2 in a sample. Agents (e.g. antisense oligonucleotides) which inhibit the expression of SPLICE erbB-2 are useful for reducing tumor cell proliferation and treating cancer. Substances which stimulate SPLICE erbB-2 are useful for treating conditions involving damaged cells including conditions in which degeneration of tissue occurs, such as arthropathy, bone resorption, inflammatory diseases, degenerative disorders of the central nervous system and wound healing.

It is a member of the tyrosine kinase family of receptor-like glycoproteins and shows homology to the epidermal growth factor receptor (EGFR). It probably plays a part in cell growth and/or differentiation. The HER-2/neu gene is an oncogene. An HER-2/neu fusion protein comprising a HER-2/neu extracellular domain fused to a HER-2/neu phosphorylation domain may be used to treat or prevent cancer by eliciting or enhancing an immune response to the HER-2/neu protein. It may be used to treat malignancies such as breast, ovarian, colon, lung and prostate dancers, and may be used as an antigen to vaccinate against

Faritie: Structural studies on the zinc-endopeptidase light chain of tetanus neurotoxin. A; Reference number: S69348; MUID:95262688; PMID:7744050

A; Rocession: S69348

A; Molecule type: protein

A; Molecule type: protein

A; Molecule type: protein

A; Residues: 2-31 cDEF.

C; Comment: The source of this protein was an extrachromosomal plasmid.

C; Comment: The precursor is cleaved by endogenous proteinase activity to form light (fradual chains are not toxic when separated). The amino end of the heavy chain (fragment B); Comment: This potent neurotoxin binds to peripheral neuronal synapses, is internalized c; Comment: This potent neurotoxin binds to peripheral neuronal synapses, is internalized presynaptic neurons. It inhibits neurotransmitter release by proteolytic cleavage of sy
                                                                                                                                                                                                                                                                                                                                                                         C.Function:
Albescription: blocks neuroexocytosis via hydrolysis of a Gln-Phe peptide bond in synapt
C.Superfamily: tetanus toxin
C.Superfamily: tetanus toxin
C.Superfamily: tetanus toxin
C.Superfamily: tetanus toxin
C.Superfamily: tetanus toxin
C.Superfamily: tetanus toxin
E.2457/Product: tentoxylysin light chain (fragment A) #status predicted TIL>
F.2457/Product: tentoxylysin heavy chain (fragment B) #status experimental TTH>
F.461-1315/Product: tentoxylysin beavy chain (fragment B) #status predicted <TXB>

Major merozoite surface antigen precursor - malaria parasite (Plasmodium falciparum) (is

C.Species: Plasmodium falciparum

C.Species: Plasmodium falciparum

C.SACCESSION: AS4498

R.Peterson, M.G.; Coppel, R.L.; McIntyre, P.; Langford, C.J.; Woodrow, G.; Brown, G.V.;

M.O.: Biochem. Parasitol. 27, 291-302, 1988

A.Title: Variation in the precursor to the major merozoite surface antigens of Plasmodiu

A.Reference number: AS4498; MuID:88142999; PMID:2449612

A.Status; preliminary

                                                                                                                                                                                                                                                                                                                                     NAC. Struct. Biol. 4:788-792(1997).

-!- FUNCTION: TETANUS TOXIN ACTS BY INHIBITING NEUROTRANSMITTER

RELEASE. IT BINDS TO PERIPHERAL NEURONAL SYNAPSES. IS INTERNALIZED

AND MOVES BY RETYGGRADE TRANSPORT UP THE AXON INTO THE SPINAL CORD

WHERE IT CAN MOVE BETWEEN POSTSYNAPTIC AND PRESYNAPTIC NEURONS. IT

INHIBITS NEUROTRANSMITTER RELEASE BY ACTING AS A ZINC

ENDOPSEPTIDASE THAT CARALYZES THE HYDROLYSIS OF THE 76-GLN-|-PHE-77

BOND OF SYNAPTOBREVIN-2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         SUBUNIT: THE PRECURSOR POLYPEPTIDE IS SUBSEQUENTLY CLEAVED TO YIELD SUBCHAINS L AND H. THESE REMAIN LINKED BY A DISULFIDE BRIDGE AND ARE NON-TOXIC AFTER SEPARATION.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 PRINTS; PR00760; BONTOXIIYSIN.

A complete sequence of T. tengcongensis genome.";

"A complete sequence of T. tengcongensis genome.";

-!- FUNCTION: Catalyzes the condensation of the acetyl group of acetyl-CoA with 3-methyl-2-oxobutanoate (2-oxoisovalerate) to form a cetyl-CoA with 3-methyl-2-oxobutanoate (2-isopropylmalate).

-!- CATALYTIC ACTIVITY: 3-carboxy-3-hydroxy-4-methylpentanoate + COA = acetyl-CoA + 3-methyl-2-oxobutanoate + H(2)O.

-!- FUNCTION: Converts holo-ACP to apo-ACP by hydrolytic cleavage of the phosphopantetheine prosthetic group from ACP (By similarity).
-!- CATALYTIC ACTIVITY: Holo-[acyl-carrier protein] + H(2)0 = 4'-phosphopantetheine + apo-[acyl-carrier protein].
-!- SIMILARITY: BELONGS TO THE ACPD FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       STRAIN=NCDO 763; MEDLINE=95096044; PubMed=7798200; Monnet V., Nardi M., Chopin A., Chopin M.-C., Gripon J.-C.; Monnet V., Nardi M., Chopin A., Chopin M.-C., Gripon J.-C.; "Biochemical and genetic characterization of PepF, an oligopeptidase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

-1- FUNCTION: TETANUS TOXIN ACTS BY INHIBITING NEUROTRANSMITTER
RELEASE. IT BINDS TO PREIPHERAL NEURONAL SYRAPSES, IS INTERNALIZED
AND MOVES BY RETROGRADE TRANSPORT UP THE AXON INTO THE SPINAL CORD
WHERE IT CAN MOVE BETWEEN POSTSYNAPTIC AND PRESYNAPTIC NEURONS. IT
INHIBITS NEUROTRANSMITTER RELEASE BY ACTING AS A ZINC
ENDOPERIDASE THAT CATALYZES THE HYDROLYSIS OF THE 76-GLN- |- PHE-77
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   SUBUNIT: THE PRECURSOR POLYPEPTIDE IS SUBSEQUENTLY CLEAVED TO YIELD SUBCRAINS L AND H. THESE REMAIN LINKED BY A. DISULFIDE BRIDGE AND AND ATTER SEPARATION.

J. Biol. Chem. 269:12764-12772(1994).
-!-FUNCTION: BOTULINUS TOXIN ACTS BY INHIBITING NEUROTRANSMITTER AND MOVES BY RETROGRADE TRANSPORT UP THE AXON INTO THE SPINAL CORD WHERE IT CAN MOVE BETWEEN POSTSYNAPTIC AND PRESYNAPTIC NEURONS. IT INHIBITS NEUROTRANSMITTER RELEASE BY ACTING AS A ZINC ENDOPRETIDASE THAT CAPALZES THE HYDROLYSIS OF THE 58-GLN-|-LYS-59 BOND OF SYNAPTOBREVINS-1 AND -2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 neuroexocytosis apparatus, synaptobrevins, SNAP25 or syntaxin. No detected action on small molecule substrates.
SUBUNIT: DISULFIDE-LINKED HETERODIMER OF A LIGHT CHAIN (L) AND A HEAVY CHAIN (H). THE LIGHT CHAIN HAS THE PHARMACOLOGICAL ACTIVITY WHILE THE N-AND C-TERMINAL OF THE HEAVY CHAIN MEDIATE CHANNEL

-- FUNCTION: Inhibite acetylcholine release. The botulinum toxin binds with high affinity to peripheral neuronal presynaptic membrane, is then internalized by receptor-mediated endocytosis. The C-terminus of the heavy chain (H) is responsible for the adherence of the toxin to the call surface while the N-terminus mediates transport of the light chain from the endocytic vesicle to the cytosol. After translocation, the light chain (L) hydrolyzes the 197-Gln-|-Arg-198 bond in SNAP-25, thereby blocking neurotransmitter release. Inhibition of acetylcholine release results in flaccid paralysis, with frequent heart or respiratory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CATALITIC ACTIVITY: Limited hydrolysis of proteins of the neuroexocytosis apparatus, synaptobrevins, SNAP25 or syntaxin. No detected action on small molecule substrates
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ø

Nature 359:832-835(1992)

PUNCTION: BOTULINUS TOXIN ACTS BY INHIBITING NEUROTRANSMITTER

RELEASE. IT BINDS TO PERIPHEAL NEURONAL SYNAPEGS, IS INTERNALIZED

AND MOVES BY RETROGRADE TRANSPORT UP THE AXON INTO THE SPINAL CORD

WHERE IT CAN WOVE BETWANDER TO AND PRESYNAPIT C NEURONS. IT

INHIBITS NEUROTRANSMITTER RELEASE BY ACTING AS A ZINC

ENDOPERIDASE THAT CLEAVES THE 76-GLN-|-PHE-77 BOND OF

SYNAPTOBREVIN-2.

C.-!- CATALYTIC ACTIVITY: Limited hydrolysis of proteins of the

neuroexocytosis apparatus, synaptobrevins, SNAP25 or syntaxin. No

detected action on small molecule substrates.

C.-!- SUBUMIT: DISULETUB-LIMIKED HETERODIMER OF A LIGHT CHAIN (L) AND A

HEAVY CHAIN (H). THE LIGHT CHAIN HAS THE PHARMACOLOGICAL ACTIVITY,

WHILE THE N-AND C-TERMINAL OF THE HEAVY CHAIN MEDIATE CHANNEL

Morse sickness virus serotype 6: evolutionary relationships within and between the orbivinuses.";
Wirus Res. 53:53-73(1998)
-!- FUNCTION: THE VP2 PROTEIN IS ONE OF THE TWO PROTEINS (WITH VP5)
WHICH CONSTITUTE THE VIRUS PARTICLE OUTER CAPSID. IT IS THE
MAJOR TARGET OF THE HOST IMMUNGENIC RESPONSE.
-!- SIMILARITY: BELONGS TO THE REOVIRUSES VP2 FAMILY.

-!- FUNCTION: BOTULINUS TOXIN ACTS BY INHIBITING NEUROTRANSMITTER RELEASE. IT BINDS TO PERIPHERAL NEURONAL SYNAPSES, IS INTERNALIZED AND MOVES BY RETROGRADE TRANSPORT UP THE AXON INTO THE SPINAL CORD WHERE IT CAN MOVE BETWEEN POSTSYNAPTIC AND PRESYNAPTIC NEURONS. IT INHIBITS NEUROTRANSMITTER RELEASE BY ACTING AS A ZINC ENDOPERTIDASE THAT CATALYZES THE HYDROLYSIS OF THE 180-ARG-|-ILE-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                MEDLINE=92174922; PubMed=1S41280; Whelan S.M., Elmore M.J., Bodsworth N.J., Atkinson T., Minton N.P.; Whelan S.M., Elmore M.J., Bodsworth N.J., Atkinson T., Minton N.P.; "The complete amino acid sequence of the Clostridium borulinum type-E neurotoxin, derived by nucleotide-sequence analysis of the encoding

CATALYTIC ACTIVITY: Limited hydrolysis of proteins of the neuroexocytosis apparatus, synaptobrevins, SNAP25 or syntaxin. No detected action on small molecule substrates.

SUBMUT: DISULFIDE LINKED HETEROLIMER OF A LIGHT CHAIN (L) AND A HEAVY CHAIN (H). THE LIGHT CHAIN HAS THE PHARMACOLOGICAL ACTIVITY, WHILE THE N-AND C-TERMINAL OF THE HEAVY CHAIN MEDIATE CHANNEL
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    MEDLINE=94124495; PubMed=8294407; Binz T., Blanz T., Blanz T., Suedhof T.C., Jahn R., Niemann H.; Maraeaki S., Baumeister A., Link E., Suedhof T.C., Jahn R., Niemann H.; Proteolysis of SNAP-25 by types E and A botulinal neurotoxins.";

"Organization and phylogenetic interrelationships of genes encoding components of the botulinum toxin complex in proteolytic Clostridium toxin components in proteolytic Clostridium toxin botulinum types A, B, and F: evidence of chimeric sequences in the T. Syst. Bacteriol. 46:1105-112(1996).

In J. Syst. Bacteriol. 46:1105-112(1996).

In FUNCTION: Inhibits acceylcholine release. The botulinum toxin binds with high affinity to peripheral neuronal presynaptic membrane, is then internalized by receptor—mediated endocytosis. The C-terminus of the heavy chain (H) is responsible for the adherence of the toxin to the cell surface while the N-terminus mediates transport of the light chain from the endocytic vesicle to the cytosol. After translocation, the light chain (L) hydrolyzes the 197-Gln-[-Arg-198 bond in SNAP-25, thereby blocking neurotransmitter release. Inhibition of acceptochine release results in flacid paralysis, with frequent heart or respiratory failure (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This SWISS-PROT entry is copyright. No detected action on small molecule substrates.
SUBNIT: Disulfide-linked heterodimer of a light chain (L) and a heavy chain (H) (By similarity).
SUBCELUIAR LOCATION: Secreted.
MISCELLANEOUS: There are seven antigenically distinct forms of botulinum neurotoxin: Types A, B, Cl, D, E, F, and G. SIMILARITY: BELONGS TO PEPTIDASE FAMILY M27.
                                                                                                                                                                                     BXA2_CLOBO STANDARD; PRT; 1295 AA.
